

DEEPAKRAJ S

Frontend Developer | Angular Specialist

+91 9025074059 • deepakselvam0402@gmail.com • Chennai, India

PROFESSIONAL SUMMARY

Frontend Developer with 2+ years of experience building enterprise-grade Angular applications. Specialised in Angular (v17–19), TypeScript, RxJS, and Micro-Frontend (MFE) architecture. Proven track record of translating complex UI/UX designs into high-performance, reusable component libraries and integrating RESTful APIs in Agile, cross-functional teams. Strong focus on code quality, performance optimisation, and testable, maintainable codebases.

WORK EXPERIENCE

Associate Software Engineer | Beyond Universe

Jul 2023 – March 2026

Project: 1Core & 1Core_NAVY (Enterprise Defence Web Platform)

- Built and maintained 5+ Angular modules powering a defence-sector enterprise platform, improving page responsiveness by ~25% through OnPush change detection and lazy-loaded routing.
- Integrated 15+ RESTful APIs in collaboration with backend teams, reducing average API response-handling time by implementing RxJS operators (switchMap, debounceTime, catchError).
- Developed cross-browser-compatible UI components using HTML5, CSS3, TypeScript; ensured consistent rendering across Chrome, Firefox, and Edge.
- Resolved 30+ complex JavaScript logic challenges without relying on built-in array/string methods, demonstrating strong algorithmic thinking.
- Actively contributed to Agile ceremonies — sprint planning, daily stand-ups, and retrospectives — and performed peer code reviews that reduced bug escape rate.

Project: 4DCRM (Micro-Frontend CRM Platform)

- Architected and delivered 3 independently deployable Micro-Frontend (MFE) modules using Angular 17, cutting release cycle time for individual features by decoupling deployments.
- Built a reusable component library of 20+ UI components (data tables, modals, form controls) consumed across MFE modules, reducing duplicate code by an estimated 40%.
- Leveraged Angular's dependency injection, lifecycle hooks, and NgRx for predictable state management across a complex multi-team CRM application.
- Translated high-fidelity Figma designs into pixel-accurate Angular components, maintaining design-system consistency across the application.
- Optimised bundle size using tree-shaking and code-splitting, contributing to a 20% reduction in initial load time.

TECHNICAL SKILLS

Frontend Frameworks: Angular 15 / 17 / 18 / 19, RxJS, NgRx

Languages: TypeScript, JavaScript (ES6+), HTML5, CSS3, SCSS

Architecture: Micro-Frontend (MFE), Component-Driven Development, Lazy Loading

API & Integration: RESTful APIs, HTTP Client, Interceptors

Tooling & DevOps: Git, Chrome DevTools, Webpack, Angular CLI

Collaboration: JIRA, Agile / Scrum, Code Reviews, Cross-functional Teams

EDUCATION & CERTIFICATIONS

B.Sc. Information Technology

2020 – 2023
